Breastfeeding Jun 07 2020 In recent decades, global healthcare professionals and organisations have formed a wide, evidence-based consensus that breastfeeding is usually the best option for both mother and baby. However, women and professionals alike often face a sea of shifting attitudes and values, and complex social, cultural, political and economic factors that may influence women's feeding decisions. This book examines the global evidence, and the factors that affect women's decisions around initiating breastfeeding and maintaining it through the first year of their children's lives. It outlines potential areas for development and policy change at practitioner and strategic levels, and shows how health professionals can effectively communicate and provide information to help women make unpressured but informed decisions. Breastfeeding - Contemporary Issues in Practice and Policy is essential reading for healthcare professionals, policy movers and shapers, and all those with an interest in breastfeeding who wish to influence the development of related policies, practices and healthcare services.

SAP Best Practices Sep 30 2019 When I started working for SAP two decades ago I asked this question on my first day "Where are the best practices?" Prior to joining the organization I had heard people in the industry mention that one of the strengths of SAP software was that it was based on best practices. I was excited: finally I would get to see them. "There's no list" answered my mentor. "It's embedded into the processes supported by the system." "Ah," I said, a little disappointed. After two decades as an SAP consultant I can comfortably confirm this. However, this book is not about those types of best practices, it's about the best practices that should be observed when implementing, upgrading, modifying, and enhancing an SAP ERP system. This book is based on my experience in the SAP consulting industry; first as an employee of the software firm, and then as a senior manager of one of the world's largest system integrators. In it you will find the best practices specific to a successful implementation.

Implementing SAP® CRM Aug 22 2021 In today's competitive business environment, most companies realize that the better they can manage their customer relationships, the more successful they will become. Customer Relationship Management (CRM) software systems are key tools for companies to manage the customer-facing processes of their businesses. However, many companies have resisted implementing this most critical customer-oriented application due in large part to the lack of a single-point resource on implementing a CRM system. This book attempts to fill that gap. Implementing SAP® CRM will help technologists and managers come to grips with the vision, concept, and technology of CRM. It begins by laying out the groundwork for understanding CRM. It explains the concept and context of CRM and the tangible business benefits of CRM adoption. Demonstrating a professional approach to the evaluation and selection of SAP, it details the critical success factors (CSFs), patterns, and anti-patterns of a successful SAP CRM implementation. CRM implementations can add significant benefit to the company's bottom line only if the company first transforms itself into a customer-centric and customer-responsive enterprise. This book explains what it means to be a customer-centric and responsive enterprise, and provides a framework for business operations based on customer relationships, rather than the traditional four Ps (product, positioning, price, promotion). It further spells out business process reengineering (BPR) strategies to configure internal business processes and operations with SAP CRM to improve customer-facing strategies, services, and relationships.

Internet of Everything Jun 19 2021 This book focuses on the Internet of Everything and related fields. The Internet of Everything adds connectivity and intelligence to just about every device, giving it special functions. The book provides a common platform for integrating information from heterogeneous sources. However, this can be quite reductive, as the Internet of Everything provides links not only among things, but also data, people, and business processes. The evolution of current sensor and device networks, with strong interactions between people and social environments, will have a dramatic impact on everything from city planning, first responders, the military and health. Such a shared ecosystem will allow for the interaction between data, sensor inputs and heterogeneous systems. Semantics is a fundamental component of this since semantic technologies are able to provide the necessary bridge between different data representations, and to solve terminology incongruence. Integrating data from distributed devices, sensor networks, social networks and biomedical instruments requires, first of all, the systematization of the current state of the art in such fields. Then, it is necessary to identify a common action thread to actually merge and homogenize standards and techniques applied in such a heterogeneous field. The exact requirements of an Internet of Everything environment need to be precisely identified and formally expressed, and finally, the role of modern computing paradigms, such as Cloud and Fog Computing, needs to be assessed with respect to the requirements expressed by an Internet of Everything ecosystem.

An Introduction to Service Design Jul 29 2019 A comprehensive introduction to designing services according to the needs of the customer or participants, this book addresses a new and emerging field of design and the disciplines that feed and result from it. Despite its intrinsic multidisciplinarity, service design is a new specialization of design in its own right. Responding to the challenges of and providing holisitic, creative and innovative solutions to increasingly complex contemporary societies, service design now represents an integrative and advanced culture of design. All over the world new design studios are defining their practice as service design while long established design and innovation consultancies are increasingly embracing service design as a key capacity within their offering. Divided into two parts to allow for specific reader requirements, Service Design starts by focusing on main service design concepts and critical aspects. Part II offers a methodological overview and practical tools for the service design learner, and highlights fundamental capacities the service design student must master. Combined with a number of interviews and case studies from leading service designers, this is a comprehensive, informative exploration of this exciting new area of design.

Co-operative Enterprise Building a Better World Feb 25 2022 The purpose of this book is to introduce you in considerable detail to what we call the 'co-operative enterprise', and to explore with you the broader question of why co-operatives are important in today's world. This is not a "how to" book, in the normal sense. It is however (we hope) an excellent foundation upon which to broaden your understanding and appreciation of co-operative forms of enterprise, not only in your country - but around the globe. You will learn why co-operation works and also see why sometimes it may not work, and you will learn about best practices and success factors within co-operatives. If you are an employee, a manager, or an elected official within a co-operative, you will also learn about why and how leadership and management effectiveness are different in co-operative forms of enterprise. The book is divided into five parts. The first part is called "Setting the Stage", and contains two chapters. The first chapter introduces the reader to the nature of co-operation, while the second chapter looks at the evolution of co-operation all the way from social movements to business systems of enterprise. The second part is entitled "How Co-operatives Are Different" and begins by presenting what we call the "co-operative value proposition". The third and fourth chapters provide details on the difference between the co-operative sector, the private sector, and the public sector. Chapter Five describes why and how leadership and management effectiveness are different in a co-operative. The third part is entitled "Co-operatives Today" and it includes three chapters. Chapter Six describes "National and International Co-operative Development", and Chapter Seven looks at the role co-operatives have played and are playing in "Wealth Creation, Community Development ,and Poverty Reduction" around the globe. The last chapter in this section describes the "Pivotal Role for Government in Enabling Development." Part Four is entitled "Building a Better World" and it includes three chapters. The first chapter, Chapter Nine is entitled "Some Strategies and Tactics for Success". Chapter Ten is entitled "Towards a World Vision for Co-operatives". Chapter Eleven is "The Challenges and Opportunities Ahead", and it invites and challenges readers - and all co-operators - to seriously imagine what the future might be for co-operative forms of enterprise. No small undertaking to be sure! Just for fun we have included a final part called "Everything Else Co-operative" into which we cram additional co-operative website links and interesting content which we think you might like and which didn't exactly seem to fit anywhere else. You decide! We also include some of our parting after thoughts (post scripts) in this section.

Ethical and Social Marketing in Asia May 07 2020 There is a growing interest in firms' adoption of ethical and social marketing approaches among academics and practitioners alike. Ethical Marketing is the application of ethics into the marketing process, and Social Marketing is a concept that seeks to influence a target audience for the greater social good. Ethical and Social Marketing in Asia examines this so-far unexplored area, investigating why differing cultures and consumption behaviours require different emphasis in different markets. The diversity of the Asian countries provides a perplexing environment to the development and management of ethical and social marketing. The belief that bottom line profits is enough for a company, is often not favourably viewed by Asian countries emphasising collective, social and long term benefits for the people and country. Due to these interesting characteristics and complexities, the study of ethical and social marketing in Asia is a timely topic. The first chapters introduce Ethical Marketing in Asia, followed by case studies of how the approach is used across 14 diverse economies, geographically based on 'clusters'; North East, (China, Taiwan, Japan, South Korea), South East (Singapore, Malaysia, Thailand, Vietnam, Cambodia, the Philippines, Indonesia) and South Asia (India, Pakistan, Bangladesh). The second part discusses Social Marketing using the same sequence of regions and economies and the third part explores the unique link to Fairness Management in Asia, followed by a conclusion. explores the nature of ethical and social marketing from an Asian perspective discusses current ethical and social marketing researches and practices in different areas, industries, commercial and non-commercial sectors serves as an invaluable resource for marketing academics and practitioners requiring more than anecdotal evidence of different ethical and social marketing applications compares and contrasts unethical situations covering important aspects related to ethics, society and fairness includes an interesting mix of theory, research findings and practices

The CashPT¨ Blueprint: How I Built and Scaled a Successful Cash-Based Physical Therapy Practice Even When I Was Told It Was Unethical, a Bad Idea and That No One Would Pay More Than Their Copay for Physical Therapy! Nov 12 2020 After seeing 43 patients in just one day as a physical therapy student, Aaron LeBauer knew he could not treat patients effectively in the insurance model. He opened his 100% cash-based clinic, LeBauer Physical Therapy, the day he graduated with his Doctor of Physical Therapy degree. He did this so he could treat patients the way he knew they needed to be cared for, not the way the insurance companies dictated. Everyone he told about his plan to charge $100 or more per visit for physical therapy scoffed, rolled their eyes in disbelief, said it was impossible or that no patient would ever pay more than their copay for physical therapy. Over the next decade, LeBauer built his successful physical therapy clinic with his wife in Greensboro, NC. Not only does the clinic had a waiting list, but it has also employed an additional therapist and started offering wellness services. All the while, LeBauer still has plenty of time off to travel with his family.

Service Innovation For Sustainable Business: Stimulating, Realizing And Capturing The Value From Service Innovation Apr 17 2021 Service innovation is a concept that, for the last decade, has received increased attention both among academics as well as practitioners. However, service innovation is a multi-fragmented concept which often induces confusion. The main purpose of the book is to discuss and explain what service innovation is, based on contemporary research. It explains service innovation from three different perspectives: stimulation, realization, and value capture.Stimulation: Focuses on the front-end of service innovation. It deals with structures, cultures, and processes that stimulates innovation. Idea management will be a central part of this, where the specifics with handling service ideas, both internally and externally, are illuminated.Realization: Deals with aspects on how to realize service innovations. This includes different aspects such as specific tools to be used for developing services, and also processes such as service design which aims to receive a better understanding of the customer or user. As co-creation is an important aspect of service innovation, this will also be dealt with. Finally, as many service innovations require behavior change (internally within the organization and externally among the receiving parties), this will also be covered.Value capture: Companies transitioning to become more service-oriented discover the need to reconsider old business models in order to capitalize on their service offerings. Services are often taken for granted and included in the price. This book will addresses the problem of going 'from free to fee'. In addition, the book also deals with the difficulties that involve moving from a traditional product-oriented logic to a more contemporary service-logic.

Specialty Competencies in Clinical Health Psychology Aug 29 2019 As professional psychology has transformed into the practice of psychology as a health profession, a substantial focus has been placed on defining the competencies required for practicing as health service providers. Not all health service providers, however, acquire the essential competencies needed for functioning in medical hospitals and health science center settings, the province of clinical health psychology. It is

important to distinguish competencies for practicing as health service providers from competencies for the specialty practice of clinical health psychology. In Specialty Competencies in Clinical Health Psychology, Larkin and Klonoff provide a comprehensive overview of recent efforts to define specialty competencies for the practice of clinical health psychology. They have been at the table for every national conversation focusing on this topic and share this knowledge with those who desire to become clinical health psychologists and those who train and supervise them. Series in Specialty Competencies in Professional Psychology Series Editors Arthur M. Nezu and Christine Maguth Nezu As the field of psychology continues to grow and new specialty areas emerge and achieve recognition, it has become increasingly important to define the standards of professional specialty practice. Developed and conceived in response to this need for practical guidelines, this series presents methods, strategies, and techniques for conducting day-to-day practice in any given psychology specialty. The topical volumes address best practices across the functional and foundational competencies that characterize the various psychology specialties, including clinical psychology, cognitive and behavioral psychology, school psychology, geropsychology, forensic psychology, clinical neuropsychology, couples and family psychology, and more. Functional competencies include common practice activities like assessment and intervention, while foundational competencies represent core knowledge areas such as ethical and legal issues, cultural diversity, and professional identification. In addition to describing these competencies, each volume provides a definition, description, and development timeline of a particular specialty, including its essential and characteristic pattern of activities, as well as its distinctive and unique features. Written by recognized experts in their respective fields, volumes are comprehensive, up-to-date, and accessible. These volumes offer invaluable guidance to not only practicing mental health professionals, but those training for specialty practice as well.
