Wireless Oct 12 2020 The revolution of wireless communications has only just begun to transform the telecommunications industry worldwide. This book offers insight into the possible options for corporate strategists and government policymakers as they look to harness the expansion of wireless communications to meet the goals of sustainable telecommunications development. Using a multidisciplinary approach which combines policy research, legal analysis, business economics, and models of sustainability from the environmental sciences, the book compares the development of wireless communications in four countries: the United States, the United Kingdom, Russia, and Brazil. The comparative analysis points to common themes and opportunities, including: * breaking down the barriers between wireless and wireline access by changing the regulatory design which constrains service providers; * targeting the development potential of wireless access through the utilization of new technologies and service models; and * using wireless access as the basis for full facilities-based competition in both developing and developed world markets. No other book today offers this broad a context for a discussion of wireless communications and its potential impact on the evolution of the telecommunications industry.

Skill Wars Nov 24 2021 Skill Wars shows how to increase productivity and profits by making investments in human capital development. It addresses the disparity between the available jobs and available workers. By education and training only 20% of all American workers can fit well into our demanding high-tech workplace. How do we train the 80%? Skill Wars defines the race between advanced technology investment and human resources investment and shows managers how to measure that investment. It introduces a Human Capital Scoreboard of seven new business management/measurement tools including a more accurate calculation of ROI (Return on Investment) for employee performance improvement programs. It also provides case studies of how quality training can deliver on more problem-solving/thinking skills. It has a foreword by Joseph Boyett, author of The Guru Guide and Workplace 2000. Skill Wars is a "basic workplace performance primer" that presents complex issues in a simple language and format that will move both business leaders and the American public to give their popular support. There are few viable alternatives. Gordon believes that, "Only at great peril can Americans continue to largely ignore the workplace as an important arena that helps structure learning for life."

A Thousand Shades of Green Jun 27 2019 'What does it mean for the environment?' is a strategic corollary of almost any significant business decision today, and companies must take seriously their responsibilities to regulators, customers, employees and the wider society. A Thousand Shades of Green is aimed at business leaders in need of a clear understanding of the key corporate environmental challenges and the insight and vision to meet them - imperatives such as engaging stakeholders and developing partnerships, understanding the policy-making process, forming corporate responses and drafting environmental management strategies - with the promise of genuine competitive advantage for their companies. Drawing on their extensive consultancy experience with some of the most progressive companies around the world, the authors examine why and how businesses must confront the rapidly developing agenda set by environmental constraints and social and regulatory pressure. They identify the corporate environmental challenge with that of change management and advocate a recognition that there is no single strategy or endgame applicable to all companies - there are a thousand shades of green. Only by pursuing thorough, reflective, consistent, competitive and proactive strategies will businesses be able to avoid being embroiled in costly and complex reactive approaches.

Corporate reputation is a growing research field in disciplines as diverse as communication, management, marketing, industrial and organizational psychology, and sociology. As a formal area of academic study, it is relatively young with roots in the 1980s and the emergence of specialized reputation rankings for industries, products/services, and performance dimensions and for regions. Such rankings resulted in competition between organizations and the alignment of organizational activities to qualify and improve standings in the rankings. In addition, today's changing stakeholder expectations, the growth of advocacy, demand for more disclosures and greater transparency, and globalized, mediatized environments create new challenges, pitfalls, and opportunities for organizations. Successfully engaging, dealing with, and working through reputational challenges requires an understanding of options and tools for organizational decision-making and stakeholder engagement. For the first time, the vast and important field of corporate reputation is explored in the format of an encyclopedic reference. The SAGE Encyclopedia of Corporate Reputation comprehensively overviews concepts and techniques for identifying, building, measuring, monitoring, evaluating, maintaining, valuing, living up to and/or changing corporate reputations. The Politics of Corporate Taxation in the European Union Aug 02 2022 This study explores the formation of the European Union's tax policy and asks why member states did not raise objections to it. The author's analysis is enriched by two further levels of inquiry. Firstly, he examines the 'Europeanization' of domestic tax policy in Italy and the UK, asking how domestic policy has changed and what is meant by 'Europeanization'. Secondly, he puts the European Union tax policy in the wider context of tax globalization. Will the liberalization of capital movement, tax havens and the flexibility of multinationals in managing their taxable incomes wreck the European Union's fragile tax policies?

The Six New Rules of Business Dec 14 2020 The rules of business are changing dramatically. The Aspen Institute's Judy Samuelson describes the profound shifts in attitudes and mindsets that are redefining our notions of what constitutes business success. Dynamic forces are conspiring to clarify the new rules of real value creation—and to put the old rules to rest. Internet-powered transparency, more powerful worker voice, the decline in importance of capital, and the complexity of global supply chains in the face of planetary limits all define the new landscape. As executive director of the Aspen Institute Business and Society Program, Judy Samuelson has a unique vantage point from which to engage business decision makers and identify the forces that are moving the needle in both boardrooms and business classrooms. Samuelson lays out how hard-to-measure intangibles like reputation, trust, and loyalty are imposing new ways to assess risk and opportunity in investment and asset management. She argues that "maximizing shareholder value" has never been the sole objective of effective businesses while observing that shareholder theory and the practices that keep it in place continue to lose power in both business and the public square. In our globalized era, she demonstrates how expectations of corporations are set far beyond the company gates—and why employees are both the best allies of the business and the new accountability mechanism, more so than consumers or investors. Samuelson's new rules offer a powerful guide to how businesses are changing today—and what is needed to succeed in tomorrow's economic and social landscape.

Public IT Investment Jun 07 2020 The frequent failure of IT projects in the public sector suggests that significant underlying problems remain unsolved. IT projects typically involve a substantial commitment of resources and funds; consequently, project failure can result in the loss of not just the funds invested, but also of the benefits that would have been realized by successful implementation. The delivery of IT projects on time and on budget is inadequate to measure value realization. This research analyzes five Strategic Alignment (SA) perspectives that affect organizational performance in an Australian public agency when implementing IT projects: Organization Strategy (S), Knowledge (K), Decision-making (DM), Enterprise Architecture (EA) and Public Value Plan (PVP).This book shows how public IT decision-makers can realize the benefits of IT investment by effectively employing SA perspectives in IT management.
