Cognitive Phase Transitions in the Cerebral Cortex - Enhancing the Neuron Doctrine by Modeling Neural Fields Feb 17 2022 This intriguing book was born out of the many discussions the authors had in the past 10 years about the role of scale-free structure and dynamics in producing intelligent behavior in brains.

The microscopic dynamics of neural networks is well described by the prevailing paradigm based in a narrow interpretation of the neuron doctrine. This book broadens the doctrine by incorporating the dynamics of neural fields, as first revealed by modeling with differential equations (K-sets). The book broadens that approach by application of random graph theory (neuropercolation). The book concludes with diverse commentaries that exemplify the wide range of mathematical/conceptual approaches to neural fields. This book is intended for researchers, postdocs, and graduate students, who see the limitations of network theory and seek a beachhead from which to embark on mesoscopic and macroscopic neurodynamics.

Investigating the Body in the Victorian Asylum Nov 02 2020 This book is open access under a CC BY 4.0 license. This book explores how the body was investigated in the late nineteenth-century asylum in Britain. As more and more Victorian asylum doctors looked to the bodily fabric to reveal the 'truth' of mental disease, a whole host of techniques and technologies were brought to bear upon the patient's body. These practices encompassed the clinical and the pathological, from testing the patient's reflexes to dissecting the brain. **Investigating the Body in the Victorian Asylum** takes a unique approach to the topic, conducting a chapter-by-chapter dissection of the body. It considers how asylum doctors viewed and investigated the skin, muscles, bones, brain, and bodily fluids. The book demonstrates the importance of the body in nineteenth-century psychiatry as well as how the asylum functioned as a site of research, and will be of value to historians of psychiatry, the body, and scientific practice. *Deutsch als Fremdsprache* Jul 22 2022

Oral Bioavailability Assessment Apr 19 2022 Specifically geared to personnel in the pharmaceutical and biotechnology industries, this book describes the basics and challenges of oral bioavailability - one of the most significant hurdles in drug discovery and development. • Describes approaches to assess pharmacokinetics and how drug efflux and uptake transporters impact oral bioavailability • Helps readers reduce the failure rate of drug candidates when transitioning from the bench to the clinic during development • Explains how preclinical animal models - used in preclinical testing - and in vitro tools translate to humans, which is an underappreciated and complicated area of drug development • Includes chapters about pharmacokinetic modelling, the Biopharmaceutics Drug Disposition Classification System (BDDCS), and the Extended Clearance Classification System (ECCS) • Has tutorials for applying strategies to medicinal chemistry practices of drug discovery/development

***Handbook of European Homicide Research* Jun 28 2020** This comprehensive work provides a sourcebook of information about the substantive, methodological, and policy-oriented aspects of homicide research in Europe. Part one of this work covers the most recent substantive and methodological information about European homicide research. The second part will contain detailed case studies on homicide research in 15-20 individual European nations. This work will be both conceptual and practical. Conceptual aspects will focus on theoretical frameworks and patterns and trends of violence in Europe. Practical aspects will examine the results of empirical research, topics relating to different data sources and the variation of legal definitions of violence throughout Europe, and policy issues relating to variation in homicide prevention and punishment of homicide offenders throughout Europe. This handbook will not only provide an up-to-date reference that brings together known information, but will also offer previously unpublished comprehensive literature reviews and original research findings. The editors' distinctive approach is to provide readers with an English-language central source of information about the voluminous literature on European homicide research that is currently spread widely in dozens of different European and American journals.

***The Role of Smallholder Farms in Food and Nutrition Security* May 28 2020** This open access book discusses the current role of smallholders in connection with food security and poverty reduction in developing countries. It addresses the opportunities they enjoy, and the constraints they face, by analysing the availability, access to and utilization of production factors. Due to the relevance of smallholder farms, enhancing their production capacities and economic and social resilience could produce positive impacts on food security and nutrition at a number of levels. In addition to the role of small farmers as food suppliers, the book considers their role as consumers and their level of nutrition security. It investigates the link between agriculture and nutrition in order to better understand how agriculture affects human health and dietary patterns. Given the importance of smallholdings, strategies to increase their productivity are essential to improving food and nutrition security, as well as food diversity.

Becoming a Teacher Educator Feb 23 2020 *Becoming a Teacher Educator* is an impressive book for teacher educators who want to be informed about the latest views and practices of their profession. It is the first book that addresses a range of topics related to the work of teacher educators, the induction of teacher educators and their further professional development. *Becoming a Teacher Educator* has a practical focus and it provides theoretical insights, experiences of experts and practical recommendations. The book is rooted in the Association of Teacher Education in Europe (ATEE) and many of the chapters are written by authors who are active members of the ATEE. Researchers and practitioners from different parts of Europe, and beyond, joined their efforts to write a book that is truly international and combines research, practice and reflection. *Becoming a Teacher Educator* is essential reading for novice teacher educators as well as for experienced teacher educators who want to keep up with the latest insights in their profession. This book provides a guide for those who supervise novice and experienced teacher educators and for various

professionals who are responsible for the professional development of teacher educators. "There is a growing need for evidence-based resources made available to (future) teacher educators. Since a learning society requires new sets of competencies of the main actors, we are most in want of knowledgeable teacher educators that support the professional development of their (student) teachers. This book fits the actual demands." (Dr. Joost Lowyck, Professor Emeritus, former director of the Teacher Education Institute, Leuven University). "This is an original book in a very important area. The editors define the concept of 'teacher educator' widely and I think, therefore, that the book is relevant for schools, higher education, and education authorities of all kinds. The authorship and theme have wide relevance across Europe, Australasia and North America." (Prof. Bob Moon, Professor in Education Teaching Studies, Department of Education, Open University, UK). "The book highlights that, while the current global focus is very much on the need to educate "sufficient and highly qualified teachers", little political focus is given to those who "teach the teachers". What makes this book distinctive for all engaged in teacher education, whether experienced or novice, is that it allows the spotlight on those who teach the teachers and the opportunity for teacher educators to discuss, debate and seriously examine themselves as a profession." (Simone White, Deakin University, Australia)

Pure and Applied Biogeography Mar 18 2022 This book, *Pure and Applied Biogeography*, gives a very interesting report and overview about the frontiers of such parts of recent biogeographical research, which plays important roles in solving our most pressing global problems (biodiversity crisis, climate change, water issues, and sustainable agriculture). Our book consists of three sections: "Introduction", "Pure Biogeography and Global Patterns" and "Applied Biogeography and Regional Issues." After the introductory chapter, which is about the main branches and aims of biogeography in service of solving global problems, - we can find three chapters as parts of the first section. First chapter in this section is in close relation with the origin of biodiversity and conservation. The second and third chapters are about the biogeographical aspects of climate change and biodiversity. In the second section of this book three applied biogeographical chapters can be found, which are related to agriculture, theoretical background of biological plant protection against herbivores, and regional patterns in ecological biogeography.

Designed to make it easy for students to learn instrumentation, this practical book first takes students through basic skills—patient positioning, intraoral finger rests, and basic instrumentation—then covers advanced techniques, including assessment of periodontal patients and instrumentation of the root branches of multirrooted teeth, root concavities, and furcation areas. • Stand-alone modules provide step-by-step instructions for each major instrument classification (sickle scalars, universal curets, area-specific curets, etc.), providing instructors with maximum teaching flexibility. • Module outlines make it easy for students to locate specific information. • Chapter-opening learning objectives help students recognize and study important concepts. • A step-by-step format allows students to work independently and at their own pace—fostering autonomy and decision-making skills. • Key terms help students learn a whole new dental vocabulary as they move through the text. • Study aids, including boxes, tables, and flow charts, visually reinforce important content and permit quick reference during technique practice and at-home review. • Case-based patient experiences and critical thinking activities encourage students to apply concepts to clinical situations and help develop problem-solving skills. • Skill evaluation checklists guide student practice, promote self-assessment skills, and provide benchmarks for faculty evaluation of skill attainment. • Thirty-two FREE online videos (12 new to this edition) demonstrate instrumentation techniques.

Higher Education and Lifelong Learning May 08 2021 Responding to the emerging needs of lifelong learners arguably represents one of the most fundamental challenges facing higher education systems of the countries of the developing world. At the start of the new century the concept of Lifelong Learning may indeed be counted as one of the the key organising concepts underlying public policy in many countries. The interpretation of the concept, however, remains highly contested. This timely book throws new light on the dramatic changes taking place in higher education through an exploration of the participation of "non-traditional" students in ten countries. Among others, the following areas are explored: * the complex reality behind the statistics on participation in higher education in five European countries (Austria, Germany, Ireland, Sweden and the United Kingdom), North America, Japan, Australia and New Zealand * contrasting perceptions of lifelong learning * changing patterns of participation by adults in higher education * national and institutional policies and innovations to accommodate non-traditional students and new forms of study * conclusions for policy, practice and research Higher Education for Lifelong Learners will be of interest to academics, researchers and students involved with higher education, lifelong learning, and comparative education as well as policy makers, educational managers and administrators. The contributions reveal a remarkable transformation in the student body and in the way learners pursue their studies, highlighting the international impact of increasing marketisation and differentiation on the nature of the higher

education accessible to potential lifelong learners.

The Emergence of Modern Universities In France, 1863-1914 Oct 21 2019 George Weisz offers a comprehensive analysis of the French university system during the latter half of the nineteenth and early twentieth centuries. Examining the major reforms of higher education undertaken during the Third Republic, he argues that the original thrust for reform came from within the educational system, especially from an academic profession seeking to raise its occupational status. Originally published in 1983. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. Towards a Framework for Representational Competence in Science Education Oct 01 2020 This book covers the current state of thinking and what it means to have a framework of representational competence and how such theory can be used to shape our understanding of the use of representations in science education, assessment, and instruction. Currently, there is not a consensus in science education regarding representational competence as a unified

theoretical framework. There are multiple theories of representational competence in the literature that use differing perspectives on what competence means and entails. Furthermore, dependent largely on the discipline, language discrepancies cause a potential barrier for merging ideas and pushing forward in this area. While a single unified theory may not be a realistic goal, there needs to be strides taken toward working as a unified research community to better investigate and interpret representational competence. An objective of this book is to initiate thinking about a representational competence theoretical framework across science educators, learning scientists, practitioners and scientists. As such, we have divided the chapters into three major themes to help push our thinking forward: presenting current thinking about representational competence in science education, assessing representational competence within learners, and using our understandings to structure instruction.

Understanding disability policy Dec 23 2019 In an era of scarce social resources the question of the changing social policy constructions and responses to disabled people has become increasingly important. Paradoxically, some disabled people are realising new freedoms and choices never before envisioned, whilst others are prey to major retractions in public services and aggressive attempts to redefine who counts as 'genuinely disabled'. Understanding disability policy locates disability policy into broader social policy and welfare policy writings and goes beyond narrow statutory evaluations of welfare to embrace a range of indicators of disabled people's welfare. The book critically explores the roles of social security, social support, poverty, socio-economic status, community safety, official discourses and spatial change in shaping disabled people's opportunities. It also situates welfare and disability policy in the broader conceptual shifts to the social model of disability and its critics. Finally it explores the possible connection between changing official and academic constructions of disability and their implications for social policy in the 21st century. The book is supported by a companion website, containing additional materials for both students and lecturers using the book, which is available from the link above.

Reconstructing Conflict Apr 26 2020 Reconstruction - the rebuilding of state, economy, culture and society in the wake of war - is a powerful idea, and a profoundly transformative one. From the refashioning of new landscapes in bombed-out cities and towns to the reframing of national identities to accommodate changed historical narratives, the term has become synonymous with notions of "post-conflict" society; it draws much of its rhetorical power from the neat demarcation, both spatially and temporally, between war and peace. The reality is far more complex. In this volume, reconstruction is identified as a process of conflict and of militarized power, not something that clearly demarcates a post-war period of peace. Kirsch and Flint bring together an internationally diverse range of studies by leading scholars to examine how periods of war and other forms of political violence have been justified as processes of necessary and valid reconstruction as well as the role of war in catalyzing the construction of new political institutions and destroying old regimes. Challenging the false dichotomy between war and peace, this book explores instead the ways that war and peace are mutually constituted in the creation of historically specific geographies and geographical knowledges.
